CHEVY MONZA 2+2

IMPORTANT! READ THIS FIRST

You may build this kit more than one way. Before you begin building, look over the instructions carefully. Following the procedure given, test-fit parts together without cementing, after you have decided what version to build. This way you will be more familiar with the location of parts when it becomes time to use cement.

For removing small parts from the "runners" it is best to use a modelers knife, do not attempt to "twist" them off.

The highest quality styrene plastic goes into the making of each MPC model. Only paint and cement made for styrene should be used. Before joining parts, trim off excess plastic or "flash". Scrape plating from chromed parts where they are to be joined with other parts. Be careful not to get cement on exposed areas. To join parts, use cement sparingly. Apply cement to very small parts with a toothpick.

When painting your model it is best to cement all non-chromed accessories to the body and paint the whole unit at one time.

You should have no trouble assembling your kit if the instructions are followed properly.

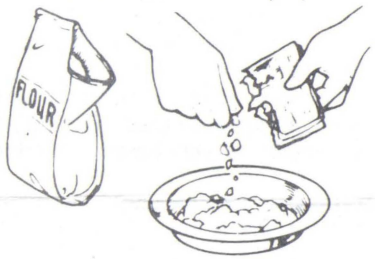
DIORAMA

To complete your model and give it a place of honor on your shelf, we suggest building a Diorama to display your creation. Following are a few suggestions for adding realism. The options are endless to personalize your model. Shown at the right are feet in 1/25 scale.

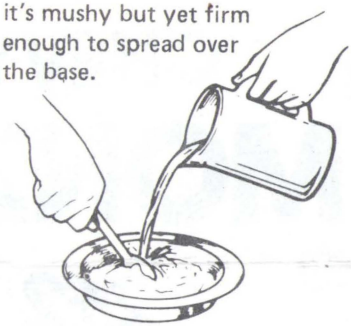
For surface of base, cut up an old piece of carpet or use paper maché as follows.

1 Tear the paper into tiny pieces and fill a good sized bowl half way up.

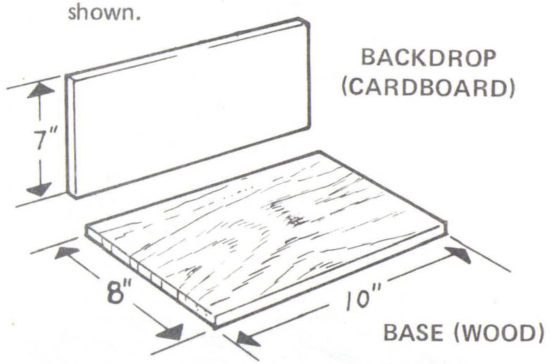


2 Fill the bowl 3/4 of the way up with flour or wheat paste.

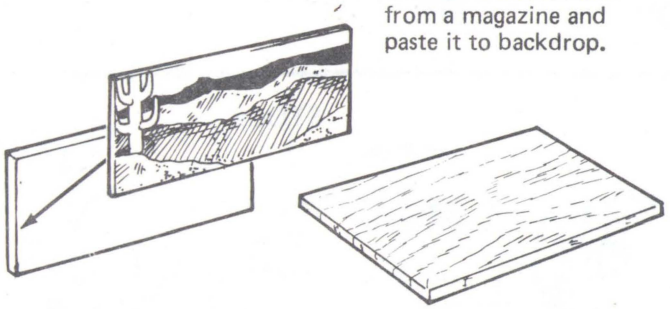
3 Add water and mix till it's mushy but yet firm enough to spread over the base.



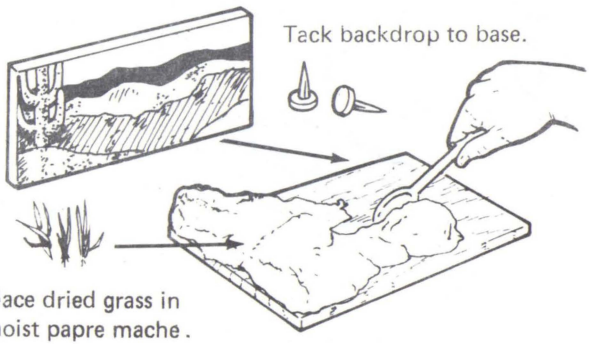
4 Cut a piece of wood for base and cardboard for back, to size as shown.



5 Cut out a desert scene from a magazine and paste it to backdrop.



6 Spread paper maché over base and paint paper maché earth color before backdrop is attached to base.



7 Run car thru still moist paper maché for tire tracks and remove. After paper maché dries, locate car.
